

Same immutable crop, two physical enlargements

Owned post-encoding reference - human scientific/source review pending

Full source width 1 inch; same 16 x 8 selected crop

Retained crop 16 x 8 pixels; 20.32 x 10.16 mm

Full source width 4 inches; identical JPEG bytes and crop

Retained crop 16 x 8 pixels; 81.28 x 40.64 mm

Physical enlargement changes millimeters per source pixel; it creates no new pixels.

Capture: 00000000-0000-4000-8000-000000000300

JPEG SHA-256: 10675e622d2ff5e5a389d90205eeaf94c9c41b546d138457900b1acd215570d7

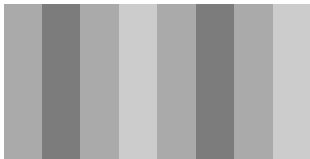

100 mm calibration line - actual printed length must be measured

Geometry only: no source quality, color/luminance, perception, printer or device qualification.

Same-scale comparison of exact representations

Owned post-encoding reference - human scientific/source review pending

JPEG quantizer step 1

Retained crop 16 x 8 pixels; 40.64 x 20.32 mm

JPEG quantizer step 32

Retained crop 16 x 8 pixels; 40.64 x 20.32 mm

Both representations: same capture, selected crop and physical image scale.

Quantizer settings do not imply a general quality grade or invisible compression.

Each image retains its exact archived post-encoding stream; no PDF resampling.

PDF DeviceRGB is uncalibrated; display/print appearance remains unqualified.

100 mm calibration line - actual printed length must be measured
